NOAH JENSEN AND STEPHANIE TRENEER

BOARD PARTITIONS FOR A 6×8 BOARD WITH 3 BLOCKERS

This table is a resource for the paper "Towards a Classification of Blocked Rectangular Grids and an Application to Finite Tiling Problems" by Noah Jensen and Stephanie Treneer. The example that generates this table is that of a game board composed of 6×8 square cells and with 3 blockers placed on the board. This table lists a board partition, defined in the referenced paper, K the subgroup of $\langle H, V\rangle$, the symmetry group of a rectangle, under which the board partition remains invariant, and each index $[\langle H, V\rangle : K]$. There are 5 entries.

Board partitions for a 5×5 board with 10 blockers

Board Partition	K	$[\langle H, V\rangle : K]$
(1,1,1,0,)	$\langle e\rangle$	4
(2,0,0,1,)	$\langle e\rangle$	4
(2,0,1,0,)	$\langle e\rangle$	4
(2,1,0,0,)	$\langle e\rangle$	4
(3,0,0,0,)	$\langle e\rangle$	4
